### Personal Profile

A highly motivated recent graduate Computer Science student from City, University of London looking to secure a Graduate position in Software Engineering to further develop my knowledge and skills in undertaking methodologies as well as gain confidence in a professional environment. Has undertaken many projects, both university based and at home all to widen my knowledge in programming practices and development technologies.

#### Education

**BSc (Hons) Computer Science 1st** 

Sept 2018 - May 2021 City, University of London

A - Levels, Sept 2016 - June 2018 Harris Sixth Form Chafford Hundred Business Studies, Economics & Computer Science

GCSEs, Sept 2011 - July 2016 Harris Academy Chafford Hundred 12 GCSEs including English & Maths

# **Projects**

Unity Survival Horror Game

Developed a Survival horror game in the Unity Engine called 'Spookyting'. Developed to showcase my knowledge gained within the Unity Engine.

Horto Android Application

Developed for final year project, a Garden Management application that incorporates Augmented Reality for designing gardens which used OpenGL to render 3D models within an augmented space.

CSV Parser

Developed, in collaboration, for the haskell module, a parser for CSV file types that can perform multiple table functions and output the file with the changes made.

## **Work Experience**

Jul - Aug 2017 Transport For London - Work Experience

Work experience with TFL in an underground station. Worked at Tower Hill Station, assisting with managers and learning the functions of management within the operation of a station as well as analysing the software used for train management. Had also assisted in platform management, such as day to day interaction with customers and advising with ideal routes and ticket buying.

Nov- Dec 2017 Legion Supplies Ltd - Assistant

Developed an understanding of professional environment and work ethics. Assisted the managers with supervised jobs and tasks.

Sept- Dec 2019 Creams Café - Team Member

Part - time job at a dessert café. Assisted in a great number of tasks and held responsibility of closure of the store on all shifts. Dealt with customers on a regular basis as well as preparing orders.

#### Skills

Experience with Java from various projects, most notably through Android Application development for Final Year Project.

Completed C++ module and experience with game development alongside OpenGL.

4 years + experience. Completed A-Level project in Python and Intro to AI project module using Python

Gained insight through experience with the Unity game engine.

Experience gained during the Haskell Module

Gained through use of OpenGL in development of Horto and during the Computer Graphics module.

Avid user of the operating system, specifically elementaryOS

Git Source Control

Experience gained through management of personal project repositories and through collaborative projects.

#### Transferable

Attention to detail

During the development of my unity game, to create a complete horror experience for users, tuning each aspect of the game-play experience was a high priority to maintain the horror element. This is evident through the YouTube videos made of the game.

Communication

At my time in TFL, I was held responsible cooperation and team - based tasks. Alongside this, advising commuters on the station and navigating them to correct area also helped develop my communication skills.

Problem - Solving

Working on my own projects has allowed me to develop this skill further as I challenge myself to take on increasingly more advanced projects and tackle new issues encountered throughout these projects.

Project Management

Through team - based projects and personal projects, I have built the ability to delegate tasks accordingly and create professional plans to accommodate the progression of these projects.
